

EG5120 robustOS Pro

Industrial Edge Computing Gateway
 2 x Ethernet ports + 2 x RS232/RS485 + 2 x DI/DO
 Wi-Fi, Bluetooth & GPS/GNSS (Optional)

INTRODUCTION

Robustel's EG5120 series is a new generation of industrial edge computing gateways, supporting global 5G/4G/3G/2G networks for cellular backhaul, with a fully-fledged Debian Operating System able to support thousands of existing or new ARMv7 (RPI compatible) based applications.

For many years, customers have used Robustel Gateways as a combination of cellular router + embedded PC and the EG5120 series takes the compute power to the next level with a 1.5GHz Cortex A53 CPU.

EG5120 supports Docker for easy deployment of applications and benefits from '**RobustOS Pro**' – Robustel's latest router OS with enhanced cybersecurity, advanced GUI and a myriad of software features including VPNs, Smart Roaming, SMS remote control and more.

RCMS is Robustel's free router monitoring service that is fully compatible with the EG5120. It allows customers to see a location overview of their routers quickly and simply on a map plus features such as data usage, signal strength, current network and much more can then be viewed on a per router/gateway basis. Over-the-air updates are supported for Firmware, router configuration and Apps serving as essential "insurance" if anything was not quite right during deployment.
